

EDscene

THE VALIDATION TOOL FOR TESTING ADAS

YOUR GLOBAL MOBILITY ENGINEERING EXPERTS

Automation enables test series to be determined with significantly greater accuracy and improved efficiency.

As assistance and automated driving functions become more and more effective, the demand placed on driver assistance sensors, and therefore on the accuracy and reliability of sensor tests are constantly increasing – and at the same time, the test volume is also growing rapidly.

With **EDscene**, a portable solution consisting of both hardware and software modules has been developed. The first upgrade stage, which is already in productive use, carries out the automated validation of the ultrasonic parking aid on motor vehicles.

Portfolio

1. Field of view
2. Echo/ground reflection
3. Detection of critical obstacles
4. Collision mitigating braking
