PEDESTRIAN PROTECTION

FUNCTION DEVELOPMENT FROM A SINGLE SOURCE

YOUR GLOBAL MOBILITY ENGINEERING EXPERTS

From virtual analysis to validation in real tests: We ensure that the streets become safer for pedestrians!

Cars stimulate emotions in us according to different aspects. Sometimes it is color, sometimes it is shape, sometimes it is performance and sometimes it is security.

As an experienced and independent engineering service provider in the global automotive industry, we know that vehicle safety is an important part of vehicle development. In pedestrian protection development, we offer all relevant services from project management to simulation and testing.

Our services – flexible and interdisciplinary!

Mexico

- Development of active and passive systems as well as sensor design
- Project and supplier management, development planning
- Strategy and target definition
- Component localization, support for type approval and certification

Simulation and validation

- Assessment of geometry and styling
- Test field determination in software Simulation and validation
- (Radioss, PAM-Crash, LS-Dyna, Abaqus)

Test validation in our test laboratories

- Coordination and execution of development and homologation tests (NCAP test protocol, ECE-R_127 Regulation)
- 2 electromechanically driven test systems with movable portals
- Testing under climatic conditions in complete vehicle climatic chambers
- All pedestrian protection impactors (including Flex PLI, upper leg, adult head 4.5 Kg, child head 3.5 Kg)
- Individual test design for pre-development topics
- Mark up procedure
